Best Local :
The sequences given in AAG79422-23 represent regions 2 and 3 of human factors VIII and IX. Region 2 comprises the interaction between N346 of factor IXa and E455 and K570 of factor VIIIa, and the interaction between R403 of factor IXa and E633 of factor VIIIa. Region 3 comprises the interaction between K293 of factor IXa and D712 of factor VIIIa, and the interaction between K293 of factor IXa and D712 of factor VIIIa, and Fragments of these polypeptides inhibit the interaction of blood
                                                                                                                                                                  New polypeptide inhibits interaction of blood coagulation factor VIIIa with factor IXa precluding activation of factor X, useful for preventing or treating coagulation disorders, such as thrombosis, atherosclerosis and restenosis -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              activating activity. Administration of the antibodies or their derivatives leads to an increase in the procoagulant activity of FIXA, even in the presence of FVIIIa inhibitors. This allows for rapid blood coagulation even in the absence of FVIII or FVIIIA, ar in the case of FVIII inhibitor patients. The antibodies or their derivatives are used in a claimed pharmaceutical composition for treating patients with blood coagulation disorders, especially haemophilia A and haemorrhagic diathesis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 region 3 (CDR3) of an antibody having anti-Factor IX (FIX) or anti-activated Factor IX (FIXa) activity. Such antibodies and their derivatives (including those that comprise the present CDR3 peptide) have Factor VIIIa (FVIIIa) cofactor activity or FIXa

                                                                                                                                                                                           This is a fragment corresponding to internal AAs 373-740 of human Factor-VIII which may be crosslinked resulting in increased stability and retention of high activity over extended periods of time after activation by thrombin. The polypeptide is used to prevent or treat diseases caused by the absence or deficit of Factor-VIII in a subject such as haemophilia. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                    Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Crosslinked Factor VIII polypeptide which is stable - is prepd. using bis(sulphosuccinimydyl) suberate or disuccinimydyl suberate in the presence of polysorbate 80 to produce a coagulant with long lasting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     coagulation factor VIIIa with blood coagulation factor IXa. They als inhibit the activation of blood coagulation factor X, or inhibit blo coagulation. These peptide fragments are useful in preventing and/or treating coagulation disorders, in particular cardiovascular disorde such as thrombosis, atherosclerosis and restenosis.
                                                                                                                                                                                                                                                                                                                                                                                                   Disclosure:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The sequence represents N-terminal residues 1-720 of a human Factor-
UIII heavy chain. The sequence is shorter than the A1-A2 domain,
and is produced by treating a polypeptide containing the full A1-A2
domain of full-length Factor-VIII with a protease, e.g. thrombin.
The fragment has the same specific activity as full-length
Pactor-VIII in a chromogenic assay and the activity is a factor of two
clower in a clotting assay, and the fragment is activated by thrombin
at a slower rate and to a lower level than fragments 1-740 (AAR74090),
clower in a clotting assay and the fragment is produced
recombinantly to reduce production costs and improve safety, and
production levels and stability are higher than for the full-length
form. The fragment may be used to treat patients who have developed
antibodies against epitopes in the C-terminal part of the heavy chain.
(Updated on 25-MAR-2003 to correct pN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

                                                                                                                                                                                                                             and is produced by treating a polypeptide containing the full 11-A2 domain of full-length Factor-VIII with a protease, e.g. thrombin. The fragment has the same coagulant specific activity as full-length Factor-VIII in a chromogenic assay, and is activated by thrombin at a similar rate. The fragment may be produced recombinantly to reduce production costs and improve safety, and production levels and stability are higher than for the full-length form. The fragment may be used to treat patients who have developed antibodies against epitopes in the C-terminal part of the heavy chain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Factor VIII polypeptide(s) comprising a heavy chain shorter than native A1-A2 domain - are easier to produce recombinantly and retain coagulant activity, may be used to treat patients who have developed antibodies to C-terminal epitope(s) of Factor VIII
                                                                                                                                                                                              Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The sequence represents N-terminal residues 1-729 of a human Factor-VIII heavy chain. The sequence is shorter than the A1-A2 domain,

Asp-403, Asp-404, Asp-433, Asp-482 and Asp-500 are preferably substituted by Asn, Glu-434 and Glu-440 are preferably substituted by Gln. The new derivative has the same activity as the wild-type Factor-VIII but with improved stability (the activity is maintained for a longer period compared to the rapid decline of the activity of wt Factor-VIII). The new derivative can be used in a composition for treating diseases caused by an absence or deficiency of Factor-VIII, especially haemophilia. (Updated on 25-MAR-2003 to correct DR field.)
                                                                                                                                                                                                                                                                      Human Factor-VIII derivative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel factor VIII derivative used to treat haemophilia - and comprises a functional A2 domain containing a mutation at one
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Misc-difference

                                                                                                                                                                                                                                                                                                                                                                                                                 Homo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The new Factor-VIII derivative comprises a functional A2 domain in which Cys-692 is deleted or replaced with another amino acid residue, preferably Ser (see AR78962). Alternatively, Glu-720 and/or Tyr-729 are deleted or substituted with various amino acids (as in the Features). The new derivative has the same activity as the wild-type Factor-VIII but with improved stability (the activity is maintained for a longer period compared to the rapid decline of the activity of wt Factor-VIII). The new derivative can be used in a composition for treating diseases caused by an absence or deficiency of Factor-VIII, especially haemophilia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel factor VIII derivative used to treat haemophilia - and comprises a functional A2 domain containing a mutation at one

                                              Disclosure;
                                                                                                                                       WPI; 1995-194038/25.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The new Factor-VIII derivative comprises a functional A2 domain in which Cys-692 is replaced with Ser. For other (less preferred) substitutions at this site, see AAR76961. Alternatively, Gu-720 and/Tyr-729 are deleted or substituted with various amino acids (as in the Features). The new derivative has the same activity as the wild-type Factor-VIII but with improved stability (the activity is maintained for a longer primotored to the rapid decline of the activity of wt Factor-VIII). The new derivative can be used in a composition for treating diseases caused by an absence or deficiency of Factor-VIII, especially haemophilia.
                                                                                                                                                                                                                    12-NOV-1993;

                                                                                                                                                                  The sequence represents N-terminal residues 1-740 of a human Factor-VIII heavy chain. The sequence contains entire A1 and A2 domains, and truncated forms (1-720 in (AAR74088)) and 1-729 in (AAR74089)) may be produced by treatment with a protease, e.g. thrombin. The C-terminally truncated fragments have the same coagulant specific activity as full-length Factor-VIII, and may be produced recombinantly to reduce production costs and improve safety, giving higher production levels and stability than for the full-length form. The fragments may be used to treat patients who have developed antibodies against epitopes in the C-terminal part of the heavy chain. (Updated on 25-WAR-2003 to correct PN field.)
                                                                                                                       Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Factor VIII polypeptide(s) comprising a heavy chain shorter than native A1-A2 domain - are easier to produce recombinantly and retain coagulant activity, may be used to treat patients who have developed antibodies to C-terminal epitope(s) of Factor VIII
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Disclosure; Page 30-32; 51pp; English.

                                                                                                                                                              This sequence represents the A2 domain of a human factor VIII derivative.

C Factor VIII is a large glycoprotein which is present in plasma at low concentrations. Factor VIII is an essential part of the clotting reaction in response to a wound. Factor VIII is susceptible to cleavage by thrombin, activated protein C, plasmin, and other serine proteases. Full length factor VIII consists of three repeats of the A-domain, a B-domain and 2 repeats of the C-domain. Active factor VIII has the A1 domain cleaved off. Factor VIII is too unstable for use in recombinant techniques. Factor VIII containing this sequence has improved stability and shows resistance against enzymatic activity present in mammalian cells. This means that factor VIII containing this sequence can be used in recombinant techniques. A factor VIII derivative can be used for treating diseases caused by an absence or deficiency of factor VIII (in the same way as normal factor VIII) e.g. haemophilia. The advantage with using a recombinant factor VIII also includes no need for lots of domors in order to get a sufficient amount. Also, there is no long purification process, and there is no risk of transmission of blood-bourne diseases

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CC VIII (FVIII) mutant protein, comprising a deletion of the B domain and CC von willabrand factor binding site, a mutation at Arg740 and an addition CC of an amino acid sequence spacer between the A2 and A3 domains. Factor CC VIII, along with calcium and phospholipid, acts as a cofactor for factor CC IXA, when it converts factor X to the activated form (factor XA). FVIII CC is the coagultion factor deficient in the X-chromosome-linked bleeding CC disorder haemophilia A. Several other mutant FVIII proteins have also CC been created (see AAW33222-29). The FVIII mutant F309S (AAW33225) is CC capable of recombinant secretion at higher levels than typically obtained CC with wild type FVIII and retains pro-coagulant activity. The FVIII caprotein C (APC) cleavage. The present FVIII mutant can form a more coagulant configuration, and have an approximate 5-fold increase in Specific activity compared to purified wild type FVIII, while increasing their binding affinity to von Willebrand factor improves their coagulactive compared to purified wild type FVIII, replacement therapy, while the nucleic acid molecule can be used for grant therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

```

The present sequence represents a novel pro-coagulant active factor CC VIII (FVIII) mutant probein, comprising a deletion of the B domain and CC von Willebrand factor binding site, mutations R3361, R562K and R740A and CC an addition of an amino acid sequence spacer between the A2 and A3 CC domains. Factor VIII, along with calcium and phospholipid, acts as a CC cofactor for factor IXA, when it converts factor X to the activated form CC (factor XA). FVIII is the coagultion factor deficient in the CC X-chromosome-linked bleeding disorder haemophilia A. Several other CC mutant FVIII proteins have also been created (see AAW33222-29). The FVIII CC mutant F309S (AAW33225) is capable of recombinant secretion at higher CC levels than typically obtained with wild type FVIII and retains CC pro-coagulant activity. The FVIII mutant R3361 (AAW33223) and R562X CC (AAW332223) are resistant to activated protein C (APC) cleavage. The FVIII comparising a deletion of the B domain and von Willebrand factor binding site, a mutation at Arg740 and an addition of an amino acid CC sequence spacer between the A2 and A3 domains can form a more stable CC configuration, and have an approximate 5-fold increase in specific CC binding affinity to von Willebrand factor improves their stability. CC The FVIII proteins can be administered to haemophiliacs, i.e. FVIII CC replacement therapy, while the nucleic acid molecule can be used for cote: this sequence does not appear in the specification; it was created using sequences from the given references.

                                                                                                                                      CC The present sequence represents a novel pro-coagulant active factor CC VIII (FVIII) mutant protein, comprising a deletion of the B domain and CC von Willebrand factor binding site, mutations F309S, R740A and addition CC of an amino acid sequence spacer between the A2 and A3 domains. Pactor CC VIII, along with calcium and phospholipid, acts as a cofactor for factor CC IXA, when it converts factor X to the activated form (factor XA). FVIII CC is the coagulation factor deficient in the X-chromosome-linked bleeding CC disorder haemophilia A. Several other mutant FVIII proteins have also CC capable of recombinant secretion at higher levels than typically obtained CC with wild type FVIII and retains pro-coagulant activity. The FVIII CC mutant R3361 (AAW33222-29). The FVIII mutant can form a more stable configuration, and have an approximate 5-fold increase in C App) cleavage. The present FVIII mutant can form a more CC stable configuration, and have an approximate 5-fold increase in C specific activity compared to purified wild type FVIII, while increasing CC stability. The FVIII proteins can be administered to haemophiliacs, i.e. CFVIII replacement therapy, while the nucleic acid molecule can be used CC for gene therapy.

                                                                      밁
                                                                                                     Ś
                                                                                                                                     Query Match 100.0%; 9 Best Local Similarity 100.0%; F Matches 16; Conservative 0;
                                                                                                                                                                                                                                         The RD deletion removes the DNA from Ser 741 to Ser 1657. A major part of the sequence encoding the maturation polypeptide of factor VIII:C is deleted, i.e. Gln 744 - Asp 1563. The full lenght Factor VIII:C cDNA has two changes with respect to the published sequence (EPO application 160457):

CTG to CTA at Leu 242 and TTC to CTC change at mino acid residue 1880 (Phe to Leu). The product is produced in approx. 20 times higher yields than previous recombinant produced factor VIII:C and are more easily purified. The peptide is used for treating haemophilia A, both acute and prolonged bleeding.

Title: Perfect score: US-09-661-992B-5 58

Sequence: 1 YGNSPKGFAY 10

Scoring table: BLOSUM62

Gapop 10.0 , Gapext 0.5

127863 seqs, 47026705 residues

Total number of hits satisfying chosen parameters: 127863

Minimum DB seq length: 0
Maximum DB seq length: 2000000000

Post-processing: Minimum Match 0% Maximum Match 100% Listing first 45 summaries

Database : SwissProt\_41:\*

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

COFACTOR: FAD:
COFACTOR: FAD:
PATHWAY: DEGRADATION OF BENZOATE TO SUCCINATE AND ACETYL-COA.
SUBUNIT: Homodimer.

SIMILARITY: TO P. PUTIDA SALICYLATE HYDROXYLASE.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             FUNCTION: Responsible for the deacetylation of lysine residues on the N-terminal part of the core histones (H2A, H2B, H3 and H4). In contrast to other histone deacetylase proteins, which give a tag for epigenetic repression, it is apparently involved in transcriptional activation.

SUBUNIT: Identified in a Set3C complex with SET3, HST1, SNT1, SUBCELULAR LOCATION: NUClear.

SUBCELULAR LOCATION: NUClear.

Garcia-Cantalejo J., Baladron V., Esteban P.F., Santos M.A., del Rey F.;

"The complete sequence of an 18,002 bp segment of Saccharomyces
cerevisiae chromosome XI contains the HBS1, MRP-L20 and PRP16 genes,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Saccharomyces cerevisiae (Baker's yeast).
